Thanks for the update Nagu!  
Instead of the shared L drive, could you upload working drafts (as you see fit) to the ESC site?  
Or, do both, if you prefer?  
Everything is crazy right now...

**Subject:** formaldehyde

Good Morning Everybody,

Needless to say, I am behind on completing the formaldehyde genetox section. I was given some materials by Sury this Monday and also the database is much larger than I expected to sift through all the information and make sense.

Given that we have bimonthly IRIS meeting for the next two days with chemicals of interest to this group, I will not be able to focus on formaldehyde. I am also heavily involved in finalizing last minute things for mouse lung tumor workshop before the holidays. So just wanted to let you know that I will try to complete formaldehyde, hopefully by end of next week. I am hoping that this will not disrupt any short/long term scheduling.

I will save a working draft on the L: drive so everybody can see the progress.

Thanks  
nagu
